

# ENERGY AND ACCOUNTING

## Riverside County, CA's Dynamic Duo

### STATS

**4,500** utility accounts

**1,800+** facilities

**57** different vendors

In the United States:

**10<sup>th</sup> largest** county by population

**26<sup>th</sup> largest** county by land area

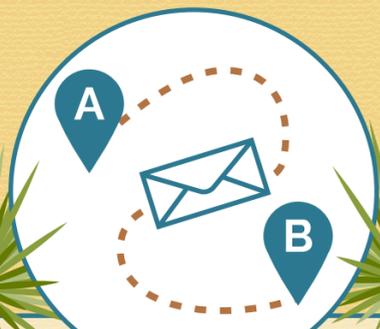

### THE PROBLEM

Riverside's legacy energy management software was out of date and had limited functionality.

Their manual bill processing workflow was labor-intensive and increased the opportunity for errors.

### IMPROVEMENTS

#### Bill processing workflow

The EnergyCAP team helped Accounting implement a new process that eliminated redundant data entry and audited and approved bills prior to payment.

Avoided costs of more than

**\$490,000**

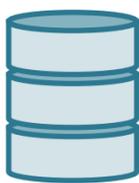

#### Electronic invoicing

Obtaining invoices electronically and importing into EnergyCAP increased bill processing speed, lowered labor costs, and saved a lot of paper.

3-year bill processing savings of

**\$115,000+**

ENERGYCAP

#### Database hosting

By purchasing EnergyCAP's database hosting service, the county reduces internal costs and receives software updates upon release.

Per year, EnergyCAP hosting saves

**\$6,700**

#### Bill CAPture<sup>SM</sup>

By using Bill CAPture to import bills, the county's cost to process one utility bill has been reduced from \$5.21/bill to just \$1.70/bill.

Annual savings of

**\$48,488**

Meanwhile, there was a **12 MW solar installation project** at 14 sites with a budget of **more than \$55 million.**

County regulations require that project costs must be covered by energy cost savings.

EnergyCAP is used to calculate and allocate the solar savings for each facility.

### SAVINGS SUMMARY

Documented savings

**\$710,000**

Initial EnergyCAP investment

**\$118,000**

Return-on-investment

**600%**
