

DOING YOUR LAUNDRY

UniFirst® Corporation Tracks Custom Energy Metrics

UniFirst **U1st**

Based in Massachusetts, UniFirst designs, manufactures, sells, rents, cleans, and delivers uniforms and protective clothing.

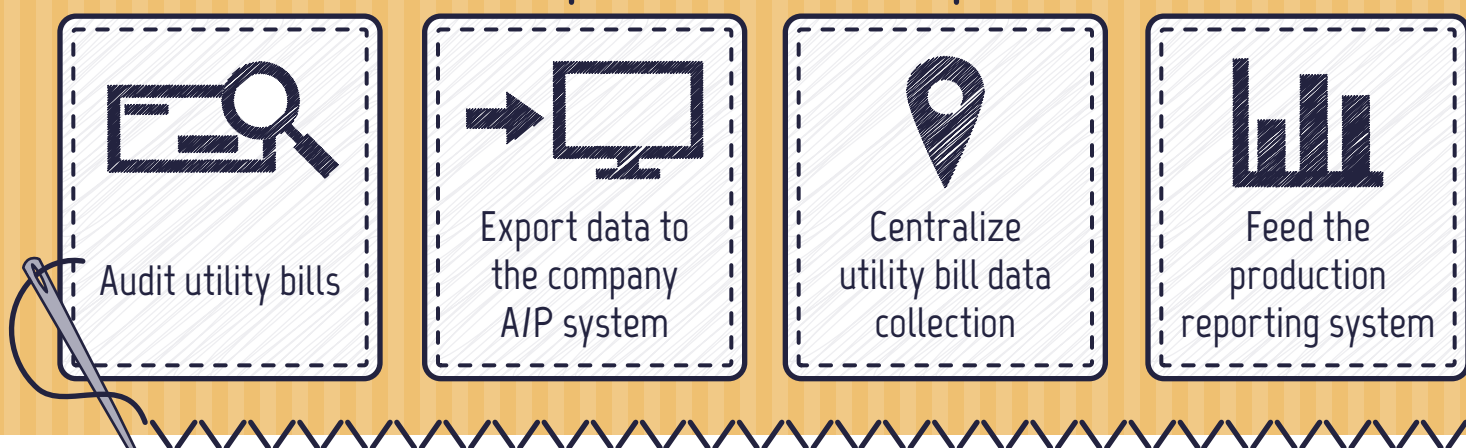

With 200+ locations across U.S. and Canada, it was difficult to track energy rates for multiple vendors. Plus, a decentralized utility bill pay process caused confusion in managing hundreds of accounts.

UniFirst needed to keep track of:

UniFirst invested in **ENERGYCAP** to:

Lisa Roberts, Manager of Engineering Administration, estimates that UniFirst had **saved enough money in the first two years using EnergyCAP** to achieve full payback for their software implementation costs.

Since then, Roberts and her team have been able to devote more time and attention to conserving resources by:

1. identifying inefficient facilities
 2. determining the cause(s)
 3. modifying that facility's energy practices
-

This system is used by engineering staff and management at all U.S. and Canada locations.

The software implementation has helped transform their energy and utility bill management programs.
