

# Feature Comparison Guide

	Features
 <b>Meter, sensor, and device tracking</b>	
Automatic and manual annotation of data and events	●
Event investigation, assignment, and documentation	●
Real-time analytics engine	●
Resolution of historic data issues/fill-in data gaps	●
Support for interval/time-series data from meters, devices, sensors, and data warehouses	●
 <b>Savings and analysis</b>	
Automatic load profiling and outlier detection based on historic data	●
Compare and benchmark time-series data	●
Export of monthly interval data totals	●
On-demand statistical modeling	●
Project tracking at the meter/device level	●
Real-time alerts, alarms, and notifications	●
Savings and Measurement and Verification (M&V) at device, meter, and facility level (IPMVP Option B)	●
Set thresholds, KPIs, group, and tag data points	●
Use and cost heat maps at device, meter, and building level	●
“What if analysis” and ROI Calculations	●
Schedule and operations optimization	●
Power usage effectiveness (PUE)	●
 <b>Indoor air quality</b>	
Detailed air quality meter tracking	◐
IAQ air monitoring	◐
Kiosk view for each monitor site	◐
 <b>APIs and Integrations</b>	
Access to APIs and online API/technical documentation	●
Technical assistance for automation services and API integrations	◐

### Reporting and presentations

	Features
Automatic emailed reports	●
Calculated points based on formulas and operational equations	●
Create and share dashboards with favorite charts and data	●
Data and reports to support ISO 50001 Certification	●
Embed content within the application	●
Interval/time-series reports	●
Multi-lingual support including the ability to easily add more languages	●
Public dashboards with the ability to embed dashboards into websites	●
Visualize buildings on a map with the latest performance metrics	●
<b>User access permissions</b>	
Unlimited number of users	●
User permissions	●

● Standard Feature    ● Optional Feature
